Receiving and Shipping Engineer

Are you curious about starting a new and exciting role at a world-leading company in the space industry? Then this is your opportunity! Cobham Gaisler is looking for a skilled Receiving and Shipping Engineer to join our experienced Supply Chain team. We welcome your application!

About the position

We have a market leading position in processor solutions for space, including satellite communications.

We can offer you a position where you get to further develop your skills in a global environment. From the office in the Gothenburg city center, you will be working in an international environment where we collaborate with customers, suppliers, and industry colleagues worldwide. As a Receiving and Shipping Engineer, your expertise in handling VLSI components to our space customers from order to shipment is welcomed and will be essential to our Supply Chain. You will be part of our Supply Chain team that is working closely with our hardware section, ASIC design companies as well as EEE components assembly and test houses.

Job description

- Handle incoming inspection and outgoing shipments
- Compare packing lists to company purchase orders and ensure that the products in each delivery match the packing list
- Inspect contents of shipments to make sure they fulfil purchase orders
- Label deliveries and allocate them to their designated place
- Store, restock, and shelve delivery items as necessary
- Together with the Supply Chain team, maintain accurate records of all received and outgoing shipments
- Conduct inventory check of products
- Accurately package, label and weigh items to be shipped and ensure proper shipment method and shipping charges
- Prepare detailed and accurate invoices to accompany shipments and ensure all items are packaged and shipped to company standards
- Ensure that stockroom is clean and organized
- Active participation in internal process improvement activities

Qualifications

To be successful with us, we see that you have prior experience in some of the following areas:

- Strong background in high-rel visual inspection of EEE components or PCBs
- Knowledge and understanding of visual inspection and ESD handling requirements of EEE components or PCBs specified in ESA- and MIL-specifications standards or similar.
- Good communication and organizational skills
- Experience with software such as Microsoft Excel and Word
- Able to work independently and within a team environment
- High School Diploma or equivalent

Application

Send your CV and cover letter to career@gaisler.com with subject "Receiving and Shipping Engineer" and your full name. Applications are evaluated continuously.
